

# Yesterday's Chalk & Blackboard Today's Interactive Electronic Whiteboard

## Interactive Presentation Whiteboards

Effectively communicate important operational information and ideas with the IPW. It is as simple to use as chalk and a blackboard, only much better.

The IPW is an advanced digital board that creates a large interactive projection screen when connected to a PC and LCD projector. The presenter controls the computer environment by touching the board surface with an electronic multimedia pen. All program functions are transferred to the pen, enabling the presenter to stay in front of the audience or group while running software programs.

User-definable Softkeys, conveniently located on both sides of the IPW, permit fast launch of video, audio, graphics/text and animation software. Touching the Softkeys with the electronic pen instantly activates preselected programs. The Softkey Editor offers direct access to any file/software available on the system creating a cohesive, informative and entertaining presentation. These tools dramatically reduce the preparation time for the presenter.

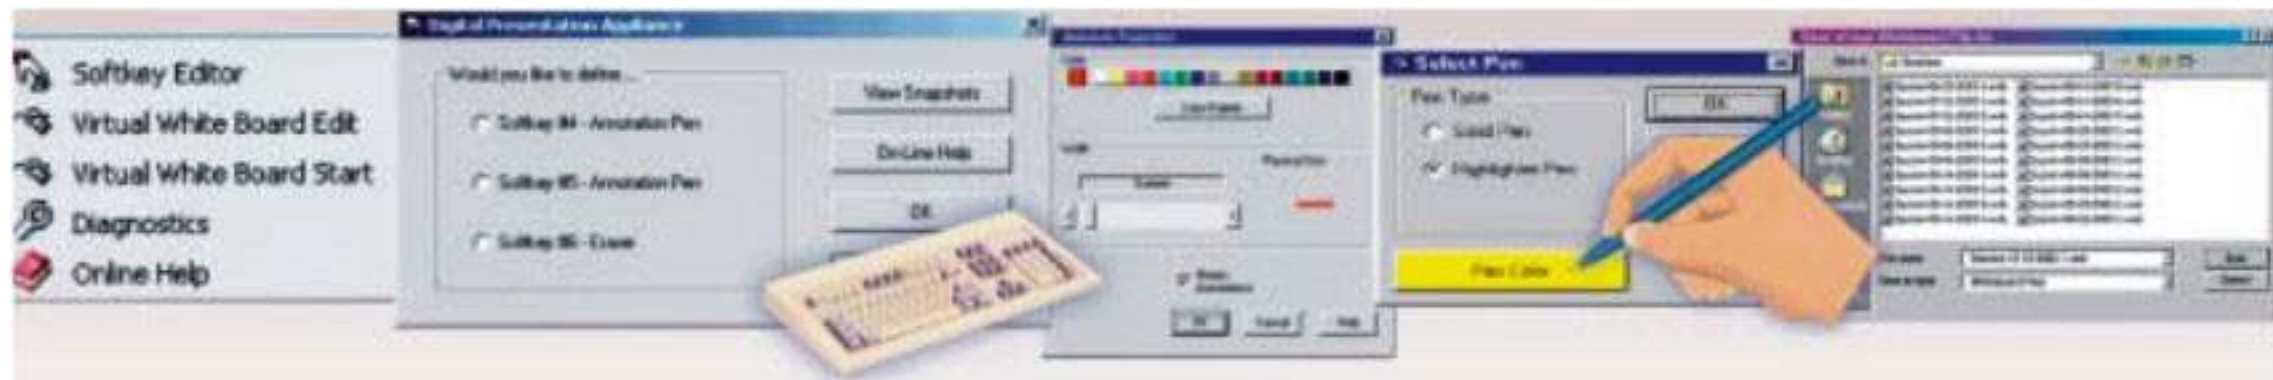

### Interactive Whiteboard in Schools

*Remain in command of your computer-generated information and audience with IPW.*

### Interactive Whiteboard for Training & Conference Room

## IPW

### Interactive Presentation Whiteboard

Bringing the facts to the decision makers.
